

Fully integrated system for Hyperthermic Intraperitoneal Chemotherapy (HIPEC)

The ThermoChem™ System by ThermaSolutions was the first fully integrated system specifically designed and manufactured for intraperitoneal hyperthermia. By exploiting heat and harnessing its power, this advanced medical technology offers a new choice in adjunctive surgical therapies. Used intraoperatively, all ThermoChem™ devices and associated disposables, raise the temperature in the peritoneum by continuously circulating fluids throughout the peritoneal cavity as part of the HIPEC procedure.

Long Lasso Tubing

The Long Lasso Tubing is a 3/8" outflow cannula that can be used with ThermaSolutions TSP Disposable Kits and is compatible with all ThermoChem™ devices. The Long Lasso Tubing acts as the outflow cannula, allowing flow of fluid from the patient back to the HIPEC circuit. The tubing allows for easy placement in a minimally invasive case.

Part number # TSP-0111

ThermaSolutions Europe
Takkebijsters 41
